The cyber security concentration prepares students in cyber incident investigation with a strong component of security data analysis; the digital forensics concentration prepares students for the collection, preservation and analysis of data found in electronic devices; and the cyber operations concentration teaches students proactive threat hunting and offensive/ defensive operations. The program concludes with a 6-credit internship/thesis in the summer following two semesters of coursework; students pick their choice based on their career goals (e.g. intelligence, risk advisory, e-discovery, corporate or public sector cybersecurity, law enforcement, or higher education). Students are expected to have basic knowledge of programming, networking, and information security before they begin their studies.
