St. Francis Institute of Technology

(Engineering College)

(An Autonomous Institute, Affiliated to University of Mumbai)

S.V.P. Road, Borivli (W), Mumbai

B. E. / B.Tech. First Year Scheme and Syllabus Common for all Departments

Approved by: - Board of Studies

Approved by: - Academic Council of St. Francis Institute of Technology

w.e.f. Academic Year 2024 – 2025

Preamble

Engineering education is essential in contemporary society as it equips individuals with the knowledge, skills, and mindset necessary to propel technological advancements, address intricate global challenges, and promote societal advancement.

St. Francis Institute of Technology (SFIT) in Borivli, Mumbai, stands as a renowned engineering institute offering both undergraduate and postgraduate degree programs in engineering. Acknowledging its commitment to quality education, UGC has conferred an autonomous status to the institute vide letter no. F.2-10/2023 (AC-Policy) dated 24th April, 2024 with effect from the academic year 2024-25. In light of this achievement, SFIT is presenting a distinctive new curriculum for its undergraduate engineering degree program adhering to National Education Policy (NEP) 2020 credit framework as per Government Directive dated 4th July 2023. In line with SFIT's vision, this curriculum aims to nurture bright young minds into technological entrepreneurs and innovative leaders of tomorrow's world, while upholding the Franciscan values of integrity, peace, and love.

The SFIT curriculum prioritizes multidisciplinary learning, flexibility, research, and innovation, integrating soft skills cultivation and ethical principles while leveraging technology for enhanced learning experiences. The undergraduate degree program consists of a total of 160-176 credits. The overall credit distribution and curriculum approach in this revision align with the AICTE model curriculum.

Abbreviations

AEC	Ability Enhancement Courses
AIML	Artificial Intelligence and Machine Learning Engineering
BE	Fourth Year Engineering
BEE	Basic Electrical and Electronics Engineering
BSC	Basic Science Courses
CA	Continuous Assessment
CC	Co-curricular Courses
CEP	Community engagement project:
CMPN	Computer Engineering
DAIML	Department of Artificial Intelligence and Machine Learning
DCMPN	Department of Computer Engineering
DECS	Department of Electronics and Computer Science
DEE	Department of Electrical Engineering
DEXTC	Department of Electronics and Telecommunication Engineering
DINFT	Department of Information Technology
DME	Department of Mechanical Engineering
ECS	Electronics and Computer Science
EE	Electrical Engineering
EEM	Entrepreneurship/Economics/Management
ELC	Experiential Learning Courses
ESC	Engineering Science Courses
ESE	End Semester Examination
EXTC	Electronics and Telecommunication Engineering
FBT	First Year B.Tech.
FP	Field Projects
HSSM	Humanities Social Sciences and Management
IKS	Indian Knowledge System
INFT	Information Technology
ISE	In Semester Evaluation
LLC	Liberal Learning Courses
MDC	Multidisciplinary Courses
MDM	Multidisciplinary Minor
ME	Mechanical Engineering
MSE	Mid Semester Examination
OE	Generic/ Open Electives (other than a particular program)

OrE	Oral Examination
OEC	Open Elective Courses
OJT	On Job Training
PC	Program Courses
PCC	Program Core Courses
PE	Practical Examination
PrE	Project Examination
PEC	Program Elective Courses
RM	Research Methodology
RP	Research Project
SC	Skill Courses
SEC	Skill Enhancement Courses
SE	Second Year Engineering
TE	Third Year Engineering
VEC	Value Education Courses
VSC	Vocational Skill Courses
VSEC	Vocational and Skill Enhancement Course

1 Course Structure and Curriculum

1.1 Definition of Credit:

Table 1-1: Credit Allocation

Schedule	Score
1 Hr. Lecture (L) per week	1 Credit
1 Hr. Tutorial (T) per week	1 Credit
1 Hr. Practical (P) per week	0.5 Credit
2 Hours Practical (P) per week	1 Credit

1.2 Range of Credits:

Table 1-2: Options for 4 years Bachelor's Engg. / Tech. Degree (As per NEP 2020)

Level	Course name	Total Credit assigned
6	Bachelor's degree (B.E / B.Tech.) in Computer Engineering with Multidisciplinary Minor	160-176
6	Bachelor's degree (B.E / B.Tech.) in Computer Engineering with Honors and Multidisciplinary Minor	180-194
6	Bachelor's degree (B.E / B.Tech.) in Computer Engineering Honors with Research and Multidisciplinary Minor	180-194
6	Bachelor's degree (B.E / B.Tech.) in Computer Engineering Major Engineering Discipline with Double Minors (Multidisciplinary and Specialization Minors)	180-194

1.3 Classification of Departments

1.3.1 Group Classification

Classes have been divided into two groups as per departments namely Group I and Group II as shown in the following Table 1-3. This ensures effective load distribution, a better academic experience, and ease of learning.

Table 1-3: Classification of SFIT departments into two groups

S. No	Group I Departments	No. of Division
1	Computer Engineering	3
2	Information Technology	2

S. No	Group II Departments	No. of Division
1	Artificial Intelligence and Machine Learning	1
2	Electrical Engineering	1
3	Electronics and Computer Science	1
4	Electronics and Telecommunication Engineering	2
5	Mechanical Engineering	1

1.4 Semester-wise Credit Distribution Structure

Table 1-4: Semester-wise subjects and credit distribution in First Year of B.Tech.

S. No.	Course Type	Subject Code	Courses	Group I Semester	Group II Semester	Credits
1	BSC	FE0_BSC_ECH_T001	Engineering Chemistry	I	II	2
2		FE0_BSC_ECH_L001	Engineering Chemistry Lab	I	II	0.5
3		FE0_BSC_EPH_T002	Engineering Physics	II	I	2
4		FE0_BSC_EPH_L002	Engineering Physics Lab	II	I	0.5
5		FE0_BSC_LAC_T103	Linear Algebra and Calculus	I	I	4
6		FE0_BSC_PRS_T204	Probability and Statistics	II	II	4
7	ESC	FE0_ESC_PSP_T101	Problem Solving with Programming	I	I	2
8		FE0_ESC_PSP_L101	Problem Solving with Programming Lab	I	I	1
9		FE0_ESC_EGD_T002	Engineering Graphics and Design	I	II	3
10		FE0_ESC_EGD_L002	Engineering Graphics and Design Lab	I	II	1
11		FE0_ESC_BEE_T003	Basic Electrical and Electronics Engineering	I	II	3
12		FE0_ESC_BEE_L003	Basic Electrical and Electronics Engineering Lab	I	II	1
13		FE0_ESC_EME_T004	Engineering Mechanics	II	I	3
14		FE0_ESC_EME_L004	Engineering Mechanics Lab	II	I	1
I. Total Credits – Basic and Engineering Science Courses (BSC/ESC)						**28**
15	PCC	FE0_PCC_###_L201	Program Core Lab	II	II	2
II. Total Credits – Program Courses (PC)						**2**
-	-	-	-	-	-	-
III. Total Credits – Multidisciplinary Courses (MDC)						-
16	VSEC	FE0_SEC_SDL_L101	Skill Development Lab	I	I	2
17		FE0_SEC_PYP_T202	Python Programming	II	II	2
18		FE0_SEC_PYP_L202	Python Programming Lab	II	II	1
IV. Total Credits – Skill Courses (SC)						**5**
19	AEC	FE0_AEC_CSE_T001	Communication Skills and Ethics	II	I	3
20	IKS	FE0_IKS_***_T001	Indian Knowledge System	II	I	2

-	-	-	-	-	-	-
VI. Total Credits – Experiential Learning Courses (ELC)						-
21	CC	FE0_CC_**1_P101	Co-Curricular Course - I	I	I	1.5
22		FE0_CC_**2_P202	Co-Curricular Course - II	II	II	1.5
VII. Total Credits – Liberal Learning Courses (LLC)						**3**
Total Credits for First Year						**43**

1.5 Subject Allocation

- Engineering Chemistry, Engineering Physics, Communication Skills and Ethics, Engineering Graphics and Design, Engineering Mechanics, Basic Electrical and Electronics Engineering and all courses under the Indian Knowledge System are offered in different semesters for Group 1 and Group 2.

- Remaining subjects are offered for both groups in the same semester.

- For detailed schedules, contact hours, credits and heads under each subject, kindly refer to Table 1-9 for Group 1 and Table 1-10 for Group 2.

1.5.1 Program Core Courses (PCC)

- In Semester II, students attend program core laboratories to gain domain-specific practical knowledge of their respective department.
- For specifics of each department refer to Table 1-5.

Table 1-5: List of courses under Program Core Courses in Semester II

S. No.	Department	Code	Program Core Course
1	Artificial Intelligence and Machine Learning	FE0_PCC_DAT_L201	Program Core Lab - Data Analytics
2	Computer Engineering	FE0_PCC_WDL_L201	Program Core Lab - Web Development
3	Information Technology		
4	Electronics and Computer Science	FE0_PCC_ADC_L201	Program Core Lab - Analog and Digital Integrated Circuits
5	Electrical Engineering	FE0_PCC_EEE_L201	Program Core Lab – Elements of Electrical and Electronics System.
6	Electronics and Telecommunication Engineering	FE0_PCC_EET_L201	Program Core Lab - Elements of Electronics and Telecommunication Engineering
7	Mechanical Engineering	FE0_PCC_WLD_L201	Program Core Lab - Welding

1.5.2 Indian Knowledge System

- For this mandatory course, students can select <u>any one</u> out of the basket of three courses offered. For details refer to table 1-6.

Table 1-6: List of courses under Indian Knowledge System

S. No.	Code	Title of the Indian Knowledge System Course
1	FE0_IKS_ESE_T001	Environmental Science and Engineering
2	FE0_IKS_TPW_T001	Principles of Town Planning and Water Management
3	FE0_IKS_TAC_T001	Trade and Commerce

1.5.3 Co-Curricular Courses

- For this mandatory course, students can select <u>any one</u> of the three offered under the basket of courses in Semester I, which will continue for the entire first year.

- The Semester I part of the co-curricular course is foundational and a prerequisite for Semester II. So no change of options is allowed in the second semester.
- Refer to table Table 1-7 below and Table 1-8 for enlisted subjects.

Table 1-7: List of courses under Co-Curricular Courses in Semester I

S. No.	Code	Title of the Co-Curricular Course - I
1	FE0_CC_YW1_P101	Yoga and Wellbeing – I
2	FE0_CC_SR1_P101	Social Service and Responsibility - 1
3	FE0_CC_SP1_P101	Sports and Physical Fitness - I

Table 1-8: List of courses under Co-Curricular Courses in Semester II

S. No.	Code	Title of the Co-Curricular Course - II
1	FE0_CC_YW2_P202	Yoga and Wellbeing – II
2	FE0_CC_SR2_P202	Social Service and Responsibility - II
3	FE0_CC_SP2_P202	Sports and Physical Fitness - II

1.6 First Year Scheme of the Syllabus

1.6.1 Departments in Group I (CMPN / INFT)

Table 1-9: Contact hours and credit distribution of courses for Departments in Group I

S. No.	Course	Contact Hours				Credits Assigned

Note:

Evaluations includes In Semester Evaluation (ISE), Mid-Semester Examination (MSE), End Semester Examination (ESE), Practical Examination (PE), Oral Examination (OrE) and Project Examination (PrE). Refer to Table 1-11 for Group 1 and Table 1-12 for Group II for detailed evaluation patterns.

- **ISE** - Includes home assignments, group assignments, quizzes, presentations, experiments, mock tests, tutorials, etc.
- **MSE** - A written assessment covering up to 50% of the syllabus, conducted at mid-semester.
- **ESE** - A written assessment covering 100% of the syllabus, conducted at the end of the semester. Modules covered in the mid-semester exam will have a 30-40 % weightage, with the remaining 60 -70% weightage assigned to the rest of the modules.
- **PE, OrE and PrE** - Practical, oral, project examinations are conducted by a pair of internal and external examiner at the end of the semester

2.3 Course Objectives

S. No.	Objectives
1	To bring about the awareness of the use of various materials like polymers and alloys and specific applications.
2	To impart knowledge of electrochemical cells. Identify different types of corrosion and suggest control measures in industries.
3	To impart knowledge of quality of fuel and different renewable sources of energy to generate power.
4	To illustrate quality parameters of water, E-waste composition and management.
5	To understand the concept of electromagnetic spectrum in various spectroscopic techniques.

2.4 Course Outcomes

The student will be able to:	
CO1	*acquaint* with synthesis, properties of alloys, advanced polymers, and their applications.
CO2	*illustrate* the concept of electrode potential, Nernst theory, *identify* different types of corrosion and suggest control measures in industries
CO3	*explain* the quality of fuel and different renewable sources of energy to generate power.
CO4	*familiarize* with the composition and handling of e-waste, analysis of water quality and treatment techniques.
CO5	*distinguish* the ranges of the electromagnetic spectrum used for exciting different molecular energy levels in various spectroscopic techniques.

2.5 Course Contents

Module	Unit	Detailed Contents	Hours
		Prerequisites	**01**
		A brief introduction to the concept of chemistry in materials science, energy & environmental science to fully grasp the interdisciplinary nature of engineering chemistry and its importance in engineering practices.	
1		**Materials for Engineering Applications**	**05**
	1.1	Alloys: Introduction, classification, composition, properties and applications of stainless steel, solders, brass, alnico and shape memory alloys	
	1.2	Polymers: Introduction, glass transition temperature (Tg), structure and property relationship in polymers, compounding of plastic, conducting	

		polymers - Introduction, synthesis and conducting mechanism, application of polyacetylene as conducting polymer, Liquid Crystals (LC's) - Introduction, classification, properties, and application in Liquid Crystal Displays (LCD's).	
2		**Electrochemistry: Electrode Systems and Corrosion**	**07**
	2.1	Electrodes and cells: Introduction of electrochemical cells, concept of electrode potential, concept of standard electrode, reference electrode, Nernst equation, electrochemical series, galvanic series simple numerical, pH meter	
	2.2	Corrosion: Definition, electrochemical theory of corrosion, types of corrosion - differential metal, differential aeration, and stress corrosion; Factors affecting the rate of corrosion. Methods of corrosion control- (I) Material selection and proper designing, (II) Cathodic protection- i) Sacrificial anodic protection ii) Impressed current method, (III) Metallic coatings- Cathodic coating (tinning) and anodic coatings (Galvanising), Application of corrosion engineering in electronic and photonic devices.	
3		**Energy Sciences**	**05**
	3.1	Chemical fuels: Introduction, calorific value - definition, gross and net calorific values; knocking, Octane number, Cetane number, anti-knocking agents, unleaded petrol, oxygenates (MTBE), catalytic converter.	
	3.2	Sustainable energy sources: Hydrogen as a fuel - advantages, production and storage, biofuels- production of biodiesel and power alcohol.	
	3.3	Electrochemical Energy Systems: Introduction to batteries, classification of batteries, construction, working and applications of Lithium-ion battery.	
4		**Water Technology and E-Waste Management**	**04**
	4.1	Water treatment: introduction, hardness of water, types of hardness, determination of hardness by EDTA method, disadvantages of hard water, removal of hardness by ion exchange method, desalination of water – Electro dialysis. BOD and COD - introduction and their significance in wastewater treatment	
	4.2	E-Waste: Introduction, sources of e-waste, composition, characteristics, and need of e-waste management, toxic materials used in manufacturing electronic and electrical products; recycling and recovery: different approaches of recycling (separation, thermal treatments, hydrometallurgical extraction, pyro metallurgical methods, direct recycling). recycling of Li-Ion batteries, extraction of copper from E-waste.	
5		**Spectroscopic Techniques and Applications**	**04**
	5.1	Spectroscopy: definition, interaction of electromagnetic radiation with matter, classification – atomic and molecular, electromagnetic spectrum, types of spectroscopy and energy changes.	
	5.2	Flame Photometry: principle, instrumentation and applications	
		Total Hours	**26**

2.6 Suggested Learning Resources

2.6.1 Textbooks

1. Wiley's Engineering Chemistry, 2nd Edition, Dr. Shubha Ramesh et al., (Wiley India), 2013.
2. Engineering Chemistry, 1st edition, Satyaprakash & Manisha Agrawal, Khanna Book Publishing, Delhi, 2012.

3. A Text book of Engineering Chemistry, 12th Edition, SS Dara & Dr. SS Umare, S Chand & Company Ltd., 2011.
4. Text Book of Polymer Science, 4th edition, F.W. Billmeyer, John Wiley & Sons, 2007.
5. AText Book of Engineering Chemistry, 17th edition, P. C. Jain and Monica Jain Dhanapat Rai Publications, New Delhi, 2018.
6. A Text Book of Engineering Chemistry, 1st edition, R.V. Gadag and Nithyananda Shetty - Medtech Publishers, 2019.
7. A Text Book of Engineering Chemistry, 4th edition, Shashi Chawla, Dhanpat Rai & Co. (P) Ltd. 2016.
8. Elementary Organic Spectroscopy- 5th edition Y.R.Sharma, S.Chand and Co.,2013

2.6.2 Reference Books

1. Corrosion Engineering, 3rd edition, M.G. Fontana, N. D. Greene, McGraw Hill Publications, New York, 2005.
2. Introduction to E-Waste Management, 1st edition, Lakshmi Raghupathy, TERI press, ISBN: 9789386530196, 2019.
3. Principles of Physical Chemistry, 48th edition, B.R. Puri, L.R. Sharma & M.S. Pathania, - S. Chand & Co., 2019.

3   Engineering Chemistry Lab (FE0_BSC_ECH_L001)

3.1   Teaching Scheme

Course Code	Course Name	Contact Hours	Credits
FE0_BSC_ECH_L001	Engineering Chemistry Lab	01	0.5

3.2   Examination and Evaluation Scheme

Evaluation	ISE	PE	OrE	PrE	Total
Marks	25	-	-	-	25

3.3   Course Objectives

S. No.	Objectives
1	To acquaint the learner with practical knowledge of the basic concepts of chemistry involved in chemical analysis.
2	To provide practical knowledge of handling chemicals and chemical analysis.
3	To equip the learner with practical skills to determine water quality parameters through volumetric and instrumental analysis.
4	To inculcate practical skills through data collection, observation and interpretation of results
5	To promote teamwork and collaborative skills through group experiments as well as improve scientific communication through lab reports and presentations.

3.4   Course Outcomes

The students will be able to:	
CO1	*acquire* knowledge about essential laboratory analytical techniques such as titration, spectrophotometry and other methods.
CO2	*collect, record and interpret* experimental data to derive relevant findings.
CO3	*gain* hands-on experience in chemical synthesis while adhering to safety regulations and established procedures.
CO4	*estimate* water quality to assess compliance with regulatory standards or environmental guidelines.
CO5	*compare* experimental results with theoretical calculations based on Nernst equation and pH values.

3.5   Course Contents

Module	Suggested List of Experiments
1	Determination of total, permanent and temporary hardness of water by EDTA method
2	To determine standard emf and the standard free energy change of Daniel cell.
3	To determine the moisture content of coal through proximate analysis
4	To determine the concentration of alkali and alkaline earth metals in various samples using Flame Photometer
5	To synthesize Bioplastic from plant products
6	Determination of molecular weight of a polymer using Ostwald's viscometer.
7	To estimate copper present in Brass sample.
8	To determine metal ion concentration using colorimeter.
9	Determination of strength of given hydrochloric acid using pH meter.
10	Determination of DO content of water sample by Winkler's method

11	Laboratory synthesis of biodiesel.
12	Preparation of potash alum from scrap aluminium.

Suggested Assignments/Projects

1. To create a project focused on recycling and up cycling plastic waste into useful products.
2. To create a battery using saltwater as the electrolyte and analyze its performance.
3. To construct a basic fuel cell and study its operation and efficiency.
4. To investigate how e-waste is currently managed in your local area and suggest improvements.
5. Analyze the lifecycle of a common electronic devices and understand the environmental impact at each stage.

Note: Lab course shall consist minimum of 08 experiments covering the syllabus of corresponding theory course but not limited to the suggested list.

3.6   Suggested Learning Resources

3.6.1   Textbooks

1. A Textbook of Engineering Chemistry, 17th edition, P. C. Jain and Monica Jain Dhanpat Rai Publications, New Delhi, 2018.
2. A textbook on Experiments and Calculations in Engineering Chemistry, 9th edition, Dara S.S., S. Chand, 2003
3. Laboratory Manual on Engineering Chemistry, 3rd edition, Rani S., Dhanpat Rai, 1998.
4. Vogel's Quantitative Chemical Analysis, 6th edition, J. Mendham,2009

3.6.2   Web Resources:

1. Amrita Virtual Lab (Chemistry)
   https://vlab.amrita.edu/index.php?sub=2&brch=190
2. Engineering Chemistry lab course (Nptel)

4.3   Course Objectives

S.No.	Objective
1	To impart the knowledge of working principle of laser and optical fibre and study its various applications.
2	To impart knowledge of interference of light from a thin film and use it in various applications.
3	To provide the learner the fundamentals of quantum physics, Schrodinger equations and the basics of quantum computing.
4	To provide the knowledge of nanomaterials and study its applications.
5	To explain the working principle of various sensors and study its applications.

4.4   Course Outcomes

The student will be able to:	
CO1	*demonstrate* the working principle and applications of Laser and *realize* the concepts of optical fibre and its applications.
CO2	*explain* the theory of interference of light from thin film and *apply* it to various engineering applications.
CO3	*relate* the fundamentals of quantum physics towards understanding the basics of quantum computing.
CO4	*discuss* various nanomaterials and *list* its applications.
CO5	*describe* working principle of sensors and their applications.

4.5   Course Contents

Module	Unit	Detailed Contents	Hours
		Prerequisites	01
		Basics of laser, fiber optics, quantum physics and interference of light	
1		**Laser and Fibre Optics**	06
	1.1	Laser: spontaneous emission and stimulated emission, metastable state, population inversion, types of pumping, resonant cavity, Einstein's equations, Helium Neon laser, Nd:YAG laser, semiconductor laser, application of lasers	
	1.2	Fibre optics: Numerical Aperture for step index fiber, critical angle, angle of acceptance, V number, number of modes of propagation, types of optical fibers, application of fibre optics in communication system	
2		**Interference in thin film**	05
	2.1	Thin films: Introduction, interference in thin film of constant	

		thickness due to reflected system, discussion on origin of colours in thin film, wedge shaped film and expression for fringe width	
	2.2	Applications of interference: Determination of thickness of very thin wire or foil, determination of wavelength of incident light, non-destructive testing (testing of flatness of a glass plate), antireflection film	
3		**Quantum Physics**	05
	3.1	de Broglie hypothesis of matter waves, de Broglie wavelength for electron, properties of matter waves, wave function and probability density, mathematical conditions for wave function, Heisenberg's uncertainty principle, Schrödinger's time independent and time dependent equations, need and significance of Schrödinger's equations, energy of a particle enclosed in a rigid box	
	3.2	Introduction to quantum computing, principles of quantum computing and its scope	
4		**Nanotechnology**	04
	4.1	Nanomaterials: Introduction, properties (optical, electrical, magnetic, structural, mechanical), surface to volume ratio, approaches to synthesize nanomaterials	
	4.2	Methods to synthesize nanomaterials: Ball milling method, sol-gel method, sputtering method, vapour deposition method, application of nanomaterials	
5		**Physics of Sensors**	05
	5.1	Piezoelectric transducers: Concept of piezoelectricity, use of piezoelectric transducer as ultrasonic generator and application of ultrasonic transducer for distance measurement, liquid and air velocity measurement	
	5.2	Resistive sensors: Temperature measurement - PT100 construction, calibration, thermocouple sensors and its types, RTD sensors, applications	
	5.3	Optical sensors: Photodiode, construction and working of a photodiode, applications	
	5.4	Pressure sensors: Concept of pressure sensing by capacitive and inductive method, applications	
		Total Hours	26

4.6 Suggested Learning Resources:

4.6.1 Textbooks

1. A Textbook of Engineering Physics, 11th Edition, Avadhanulu & Kshirsagar, S.Chand Publications, 2022.

2. A Textbook of Engineering Physics, 2nd Edition, Singh and Mallik, McGraw Hill Publication, 2017.

4.6.2 Reference Books:

1. Concepts of Modern Physics, 6th Edition, Arther Beiser, Tata McGraw Hill Publication, 2007.
2. Modern Physics, 4th Edition, BVN Rao, New Age International (P) Ltd. Publishers, 1999.
3. Optics, 2nd Edition, Ajoy Ghatak, Tata McGraw Hill, 1999.
4. Fundamentals of optics, 4th Edition, Jenkins and White, McGraw Hill, 1981.

5. Introduction to Nanotechnology, Student Edition, Charles Poole, Wiley India, 2012.

5 Engineering Physics Lab (FE0_BSC_EPH_L002)

5.1 Teaching Scheme

Course Code	Course Name	Contact Hours	Credits
FE0_BSC_EPH_L002	Engineering Physics Lab	01	0.5

5.2 Examination and Evaluation Scheme

Evaluation	ISE	PE	ORE	PrE	Total
Marks	25	0	0	0	25

5.3 Course Objectives

S. No.	Objective
1	To enable students to verify fundamental physical laws and principles through direct observation and measurement.
2	To provide students with practical experience in conducting experiments that reinforce theoretical concepts.
3	To foster skills in experimental observation, data collection, analysis, and interpretation.
4	To strengthen the student's capacity for writing effective lab report of the performed experiments.
5	To encourage teamwork and effective communication skills by fostering collaboration among students during experiments, data analysis and reporting of results.

5.4 Course Outcomes

	The students will be able to:
CO1	*recognize* the various components of an optical fibre and *relate* its applications in communication.
CO2	*realize* the application of light in the determination of dimension of a material.
CO3	*determine* the fundamental constant that defines the foundation of quantum physics.
CO4	*create* a 3D model of a nanoparticle using simulation software.
CO5	*apply* the knowledge of sensors in real-life applications.

5.5 Course Contents

S. No.	Suggested List of Experiments
1	Determination of Planck's constant 'h' using photocell.
2	Determination of Planck's constant 'h' using LED.
3	Determination of diameter of wire/hair or thickness of paper using wedge shaped film.
4	Determination of wavelength of a given source of light using wedge shaped film.
5	Determination of divergence of a given laser source.
6	Determination of numerical aperture of a given optical fibre.
7	Determination of modes of a given optical fibre.
8	Simulation experiments based on nanotechnology using open-source simulation software
9	Study of I-V characteristics of a given photo diode.
10	Measurement of distance of the target using ultrasonic distance measuring kit.
11	Calculation of area and volume of the given space like the dark room, the general lab using ultrasonic distance meter.
12	Study of temperature charecteristics of PT100 sensors.
13	Determination of Planck's constant 'h' using virtual lab.

14	Determination of divergence of a given laser source using virtual lab.
15	Determination of numerical aperture of a given optical fibre using virtual lab.

Note: Lab course shall consist minimum of 08 experiments covering the syllabus of corresponding theory course but not limited to the suggested list.

5.6 Suggested Learning Resources:

5.6.1 Textbooks

1. A Textbook of Engineering Physics, 11th Edition, Avadhanulu & Kshirsagar, S.Chand Publications, 2022.
2. A Textbook of Engineering Physics, 2nd Edition, Singh and Mallik, McGraw Hill Publication, 2017.

5.6.2 Reference Books

1. Optics, 2nd Edition, Ajoy Ghatak, Tata McGraw Hill, 1999.
2. Experiments in Engineering Physics, 3rd Edition, M.N. Avadhanulu and A.A. Dani, S. Chand Publication, 2003

6 Linear Algebra and Calculus (FE0_BSC_LAC_T103)

6.1 Teaching Scheme

Course Code	Course Name	Contact Hours	Credits
FE0_BSC_LAC_T103	Linear Algebra and Calculus	04	04

6.2 Examination and Evaluation Scheme

Formative Assessment		Summative Assessment				Total Marks
ISE		MSE		ESE		
Marks	Duration	Marks	Duration (Hrs.)	Marks	Duration (Hrs.)	
20	CA	20	1	60	2.5	100

6.3 Course Objectives

S. No.	Objectives
1	To teach fundamental concepts of matrices and its applications.
2	To prepare the learners to solve linear equations using various methods and modern tools.
3	To build mathematical skills for obtaining and analyzing eigenvalues and eigenvectors.
4	To introduce differentiation of function with several independent variables.
5	To develop formulation and evaluation of integrals over the regions.

6.4 Course Outcomes

The student will be able to:	
CO1	*identify* different types of matrices, use elementary transformations to find the rank and apply the concept of matrices to real world problems.
CO2	*apply* the knowledge of matrices to solve the system of linear equations using rank of a matrix and numerical methods and analyze linear dependency of vectors.
CO3	*implement* the concept of eigenvalue –eigenvectors to diagonalize a matrix and its applications.
CO4	*apply* the knowledge of derivatives to evaluate the partial derivatives and its applications.
CO5	*evaluate* double integrals by identifying the region of integration.

6.5 Course Contents

Module	Unit	Detailed Contents	Hours
		Prerequisite	02
		Introduction of matrices, addition, multiplication, transpose and inverse of a matrix.	
		Differentiation of function of one variable, chain rule of differentiation.	
1		**Matrices**	07
	1.1	Types of Matrices (symmetric, skew- symmetric, hermitian, skew hermitian, unitary, orthogonal matrices and properties of matrices).	
	1.2	Rank of a matrix using Echelon form, reduction to normal form and PAQ form.	
	1.3	Application of matrices to Coding and De-coding.	

2		**System of Linear Equations**	**08**
	2.1	System of homogeneous and non–homogeneous equations, their consistency and solutions.	
	2.2	Linear dependence and independence of vectors.	
	2.3	Solution of system of linear algebraic equations by (1) Gauss Jacobi iteration method (2) Gauss Seidal iteration method.	
3		**Diagonalization of matrix**	**08**
	3.1	Eigen values, Eigen vectors and its properties (Theorems without proof).	
	3.2	Cayley-Hamilton theorem (without proof) and its applications.	
	3.3	Similar matrices, diagonalizable matrices and functions of square matrix.	
	3.4	Derogatory and non-derogatory matrices.	
4		**Partial differentiation and its application**	**07**
	4.1	Partial Differentiation: Function of several variables, partial derivatives of first and higher order.	
	4.2	Differentiation of composite function.	
	4.3	Maxima and minima of function of two variables	
5		**Multiple Integration**	**07**
	5.1	Evaluation of double integrals (Cartesian and polar)	
	5.2	Tracing of cartesian and polar curves.	
	5.3	Evaluation of integrals over the given region (Cartesian and polar).	
		Total Hours	**39**

7.3 Course Objectives

Sr. No.	Objective
1	To teach fundamental concepts of set theory, relation and counting principle.
2	To develop the concepts of probability and expectation
3	To introduce various probability distributions
4	To prepare the learners to understand statistical averages
5	To build the concept of correlation and regression

7.4 Course Outcomes

The student will be able to:	
CO1	*apply* the concepts of set theory, pigeonhole principle, equivalence and partial order relations
CO2	*explain* the concepts of probability of discrete and continuous random variable
CO3	*analyze* data using various probability distributions and interpret it
CO4	*interpret* the spread of the data using statistical averages
CO5	*compute* the coefficients of correlation and regression and evaluate problems

7.5 Course Contents

Module	Unit	Detailed Contents	Hours
	Prerequisite		01
		Basics of probability	
1	Set Theory		08
	1.1	Definition of sets, Venn diagrams, complements, cartesian products, power sets, counting principle, cardinality and countability (countable and uncountable sets), proofs of some general identities on sets, pigeonhole principle.	
	1.2	Relation: Definition, types of relation, composition of relations, domain and range of a relation, pictorial representation of relation, properties of relation, partial ordering relation.	
	1.3	Permutations and combinations.	
2	Probability		07
	2.1	Conditional probability, joint probability, total probability and Bayes' theorem	
	2.2	Discrete and continuous random variables, probability mass and	

		density function	
	2.3	Expectation, variance, co-variance.	
3		**Probability Distribution**	**08**
	3.1	Discrete distribution: Bernoulli, binomial, Poisson.	
	3.2	Continuous distribution: uniform, exponential, normal.	
4		**Statistical Averages**	**08**
	4.1	Central tendency: mean, median, mode.	
	4.2	Moments & moment generating functions (first four moments about the origin & about the mean), skewness, kurtosis	
	4.3	Central limit theorem.	
5		**Statistical Techniques**	**07**
	5.1	Karl Pearson's coefficient of correlation, Spearman's Rank correlation coefficient.	
	5.2	Lines of regression, fitting of first and second degree curves.	
		Total Hours	**39**

8.3 Course Objectives

S. No.	Objective
1	To introduce problem solving techniques using structured programming approach.
2	To teach the use of control structures and functions.
3	To teach how to create and use arrays and strings.
4	To explore the advanced data types such as pointers, structures and unions.
5	To introduce the basic concepts of object-oriented programming.

8.4 Course Outcomes

	The student will be able to
CO1	*design* algorithms and flowcharts for solving problems using structured programming approach.
CO2	*apply* control structures to solve problems that involve decision making and repetition and *demonstrate* the use of modular programming.
CO3	*organize* data by *constructing* arrays and *understand* the concept of strings.
CO4	*implement* programs that use structures and union and *understand* the concept of pointers.
CO5	*compare* structured programming and object-oriented programming approach.

8.5 Course Contents

Module	Unit	Detailed Contents	Hours
		Pre-requisites	**01**
		Basic components of a computer, number systems, logical thinking for problem solving.	
1		**Introduction to Problem-solving using C Programming**	**04**
	1.1	Introduction to structured programming approach, problem solving using algorithms and flowcharts, characteristics of a good algorithm.	
	1.2	Basics of C: Keywords, data types, variables, constants, operators, basic structure of a C program, input and output	

			operations.	
2		**Control Structures and Functions**		**07**
	2.1	Branching structures: if statement, if-else statement, nested if-else statements, switch statement.	
	2.2	Looping structures: for, while and do-while, break, continue, goto statements.	
	2.3	Functions: Function prototype, function definition, function call, parameter passing, return values, scope and lifetime of variables, solving problems using user defined functions, common C library functions, introduction to recursion.	
3		**Arrays and Strings**		**06**
	3.1	Arrays: Declaration, initialization, accessing elements, array manipulation, multi-dimensional arrays.	
	3.2	Strings in C: declaration, initialization, string manipulation, string library functions	
4		**Advanced Data types in C**		**05**
	4.1	Pointers: Understanding pointers, declaration, initialization, and dereferencing using pointers, pointer operations, call by value and call by reference.	
	4.2	Structures and union: Declaration and initialization of structures and union, array of structures.	
5		**Introduction to Object-oriented Programming using C++**		**03**
	5.1	Introduction to object-oriented programming: Introduction to classes and objects, comparing structured programming and object-oriented programming approach.	
	5.2	Basic programs with C++, input and output in C++, creating class and object using C++.	
		Total Hours		**26**

9 Problem Solving with Programming Lab (FE0_ESC_PSP_L101)

9.1 Teaching Scheme

Course Code	Course Name	Contact Hours	Credits
FE0_ESC_PSP_L101	Problem Solving with Programming Lab	02	01

9.2 Examination and Evaluation Scheme

Evaluation	ISE	PE	OrE	PrE	Total
Marks	25	25	0	0	50

9.3 Course Objectives

S. No.	Objectives
1	To introduce problem solving techniques using structured programming approach.
2	To explore and use control structures and functions.
3	To demonstrate how to create and use arrays and strings.
4	To explore the advanced data types such as pointers, structures and unions.
5	To introduce the basic concepts of object-oriented programming.

9.4 Course Outcomes

The students will be able to:	
CO1	*design* algorithms and flowcharts for solving problems using structured programming approach.
CO2	*apply* control structures to solve problems that involve decision making and repetition and *demonstrate* the use of modular programming.
CO3	*organize* data by *constructing* arrays and *understand* the concept of strings.
CO4	*implement* programs that use structures and union and *understand* the concept of pointers.
CO5	*compare* structured programming and object-oriented programming approach.

9.5 Course Contents

S. No.	Suggested List of Experiments
1	**Fundamentals of C programming language** rithmetic operations on user defined input • Program to demonstrate relational, logical and bitwise operators
2	**Control statements & functions** • Program to use conditional statements • Program to demonstrate use of loops • Program to demonstrate creating functions • Program that uses standard C library functions

3	**Arrays and Strings**
	• Program to demonstrate a single dimensional array
	• Program to demonstrate a two-dimensional array
	• Program to demonstrate use of strings
4	**Advanced Data types of C**
	• Program to demonstrate the concept of call by value and call by reference
	• Program to solve a problem by using union / structure
5	**Introduction to C++**
	• Program to demonstrate solving problems using C++

Note: Lab course shall consist minimum of 08 experiments covering the syllabus of corresponding theory course but not limited to the suggested list.

9.6   Suggested Learning Resources

9.6.1   Textbooks

1. Problem Solving with C, 2nd Edition, M. T. Somashekara, D. S. Guru, K. S Manjunatha, PHI Learning, 2018.
2. Structured Programming Approach, First Edition, Pradip Dey & Manas Ghosh, Oxford University Press, 2016.
3. Object Oriented Programming with C++, 8th Edition, E. Balagurusamy, McGraw-Hill, 2020
4. C Programming with Problem Solving, First Edition, Jacqueline A. Jones & Keith Harrow, Dreamtech Press, 2009

9.6.2   Reference Books

1. Let Us C, 18th Edition, Yashwant Kanetkar, BPB Publications, 2022.
2. The Complete Reference C, 4th Edition, Herbert Schildt, McGraw Hill, 2016.
3. The Complete Reference C++, 4th Edition, Herbert Schildt, McGraw Hill, 2017.
4. Practical C++ Programming, 2nd Edition, Steve Oualline, O'Reilly, 2003.

10 Engineering Graphics and Design (FE0_ESC_EGD_T002)

10.1 Teaching Scheme

Course Code	Course Name	Contact Hours	Credits
FE0_ESC_EGD_T002	Engineering Graphics and Design	03	03

10.2 Examination and Evaluation Scheme

Formative Assessment		Summative Assessment				Total Marks
ISE		MSE		ESE		
Marks	Duration	Marks	Duration (Hrs.)	Marks	Duration (Hrs.)	
20	CA	20	1	60	2.5	100

10.3 Course Objectives

S. No.	Objectives
1	To impart and inculcate a proper understanding of the theory of projection.
2	To impart the knowledge of reading and understanding technical drawings.
3	To improve the visualization and imagination skills of the students.

10.4 Course Outcomes

The student will be able to:	
CO1	*understand* the types of lines, dimensioning systems as per IS standards, and construct engineering curves.
CO2	*apply* the basic principles of orthographic projections to draw the views of projection of points, lines and planes.
CO3	*apply* the basic principles of orthographic projections to draw the views of projection of solids.
CO4	*read* a pictorial view of an object and *draw* orthographic projections of machine parts as per IS standards.
CO5	*read*, *visualize* and *interpret* an object from orthographic views and *convert* it into an isometric view.

10.5 Course Contents

Module	Unit	Detailed Contents	Hours
	Prerequisites		
		Basic shapes - circle, polygon, triangle, locus	
1	**Introduction to Engineering Graphics**		**08**
	1.1	Principles of engineering graphics and their significance, usage of drawing instruments, types of lines, and dimensioning systems as per IS conventions.	
	1.2	Engineering curves: Construction of cycloid, involutes, and helix (of cylinder) curves only.	
2	**Projection of Points, Lines and Planes**		**08**
	2.1	Projection of points and lines: Projection of points in all four	

		quadrants, lines inclined to both the reference planes (excluding traces of lines)	
	2.2	Projection of planes: Square, pentagonal, hexagonal, and circular planes inclined to one of the reference planes (excluding composite planes)	
3	**Projection of Solids**		**08**
	3.1	Projection of solids (prism, pyramid, cone, and cylinder) inclined to both the reference planes. (excluding spheres, composite, hollow solids, and frustum of solids).	
4	**Orthographic and Sectional Orthographic Projections**		**08**
	4.1	Orthographic views of a simple machine part as per the first angle method of projection recommended by IS.	
	4.2	Full sectional views of the simple machine parts.	
5	**Isometric Views**		**07**
	5.1	Isometric views, conversion of orthographic views to isometric views using natural scale (excluding sphere).	
		Total Hours	**39**

10.6 Suggested Learning Resources

10.6.1 Textbooks

1. Text book on Engineering Drawing, K.L. Narayana and P. Kannaiah, Scitech Publisher, 2008.
2. Engineering Drawing, M.B. Shah and B.C. Rana, Pearson Publications, 2009.
3. Engineering Drawing, 53rd Edition, N.D. Bhatt, Charotar Publication, 2016.

10.6.2 Reference Books

1. Engineering Drawing and Graphics + AutoCAD, 3rd Edition, K. Venugopal, New Age International Publishers, 2007.
2. Engineering Drawing with an Introduction to AutoCAD, 11th Edition, Dhananjay A. Jolhe, Tata McGraw Hill Education Private Limited, 2014.

11 Engineering Graphics and Design Lab (FE0_ESC_EGD_L002)

11.1 Teaching Scheme

Course Code	Course Name	Contact Hours	Credits
FE0_ESC_EGD_L002	Engineering Graphics and Design Lab	02	01

11.2 Examination and Evaluation Scheme

Evaluation	ISE	PE	OrE	PrE	Total
Marks	25	0	0	0	25

11.3 Course Objectives

S. No.	Objectives
1	To inculcate the skill of drawing with the basic concepts.
2	To familiarize the learner to use AutoCAD for general purpose drawings
3	To teach basic utility of Computer Aided Drafting (CAD) tool.

11.4 Course Outcomes

The students will be able to:	
CO1	*apply* the basic principles of projections in 2D drawings using a CAD software.
CO2	*create, annotate, edit* and *plot* drawings using basic AutoCAD commands and features.
CO3	*apply* the concepts of layers to create drawing.
CO4	*use* basic AutoCAD skills to draw orthographic views of a 3D object.
CO5	*construct* the isometric views from the given orthographic views using AutoCAD.

11.5 Course Contents

S. No.	Suggested List of Experiments
1	**Introduction to AutoCAD:** Basic Draw and Modify Commands, Unit Setting, Layer Setting, Dimensioning and dimensioning style setting, Text and text style setting, Hatching, Plotting, and Print Setting.
2	Engineering Curves – Sheet 1
3	Projection of Lines – Sheet 2
4	Projection of Planes – Sheet 3
5	Projection of Solids – Sheet 4
6	Orthographic Projections (without section) – Sheet 5
7	Sectional Orthographic Projections – Sheet 6
8	Isometric Views – Sheet 7

11.6 Suggested Learning Resources

11.6.1 Textbooks

1. Engineering Drawing and Graphics + AutoCAD, 3rd Edition, K. Venugopal, New Age International Publishers, 2007.
2. Engineering Drawing with an Introduction to AutoCAD, 11th Edition, Dhananjay A. Jolhe, Tata McGraw Hill Education Private Limited, 2014.

11.6.2 Reference Books

1. Text book on Engineering Drawing, K.L. Narayana and P. Kannaiah, Scitech Publisher, 2008.
2. Engineering Drawing, 53rd Edition, N.D. Bhatt, Charotar Publication, 2016.

12 Basic Electrical and Electronics Engineering (FE0_ESC_BEE_T003)

12.1 Teaching Scheme

Course Code	Course Name	Contact Hours	Credits
FE0_ESC_BEE_T003	Basic Electrical and Electronics Engineering	03	03

12.2 Examination and Evaluation Scheme

Formative Assessment		Summative Assessment				Total Marks
ISE		MSE		ESE		
Marks	Duration	Marks	Duration (Hrs.)	Marks	Duration (Hrs.)	
20	CA	20	1	60	2.5	100

12.3 Course Objectives

S. No.	Objective
1	To introduce concept of different DC parameters and *calculate* them using various network theorems
2	To impart the concepts of single phase and three phase AC circuits and their variants.
3	To familiarize with different types of transformers, machines and semiconductor devices
4	To acquaint with various number systems, logic gates and Boolean functions

12.4 Course Outcomes

The student will be able to:	
CO1	*apply* fundamental laws and theorems to *analyze* DC circuit parameters
CO2	*understand* the basic concept of AC and *analyze* networks
CO3	*illustrate* the working principle of transformer and rotating machine.
CO4	*comprehend* the characteristics of semiconductor devices and it's applications.
CO5	*differentiate* between number systems and *synthesize* Boolean expressions using logic gates.

12.5 Course Contents

Module	Unit	Detailed Contents	Hours
	Prerequisites		01
		Resistance, inductance, capacitance, series and parallel connection of resistance, concept of voltage, current, power and energy and its units, magnetic circuit, mmf, magnetic field strength, reluctance.	
1	DC Circuits: (Only independent source)		09
	1.1	Introduction to DC sources: Ideal and practical voltage and current sources, source transformation, star to delta / delta to star transformations.	

	1.2	Kirchhoff's laws, mesh and nodal analysis.	
	1.3	Superposition theorem, Thevenin's theorem, Norton's theorem, maximum power transfer theorem.	
2	**AC Circuits**		**10**
	2.1	Generation of alternating voltage and currents, AC terminology, Root Mean Square (RMS), average value, form factor and crest factor.	
	2.2	Single-phase AC series and parallel circuits consisting of R, L, C, RL, RC, RLC combinations, power factor, real, reactive and apparent power.	
	2.3	Series and parallel resonance, Q factor, bandwidth.	
	2.4	Generation of three-phase voltages, voltage & current relationships in star and delta connections.	
3	**Transformers and Machines**		**07**
	3.1	Working principle of single-phase transformer, emf equation of a transformer, transformer losses, actual (practical) and ideal transformer, phasor diagram, equivalent circuit of transformer, efficiency of transformer.	
	3.2	Fundamental principles of rotating machines, construction, working principle and applications of stepper and servo motor	
4	**Introduction to Semiconductor Devices**		**06**
	4.1	Construction, operation and characteristics of PN junction diode, zener diode and bipolar junction transistor.	
	4.2	Application of PN junction diode as rectifier, zener diode as basic regulator and BJT as an amplifier.	
5	**Fundamentals of Digital Systems**		**06**
	5.1	Number System: Binary, octal, decimal, hexadecimal, their conversion, and arithmetic (binary addition, subtraction using 1's & 2's complement)	
	5.2	Logic Gates: AND, OR, NOT, NAND, NOR, EX-OR, EX-NOR universal gates.	
	5.3	Boolean algebra, Demorgan's theorem.	
		Total Hours	**39**

12.6 Suggested Learning Resources

12.6.1 Textbooks

1. Theory and Problems of Basic Electrical Engineering, 13th edition, D P Kothari and I J Nagrath, PHI, 2011
2. Basic Electrical Engineering, 2nd edition, B.R Patil, Oxford Higher Education
3. Digital Fundamental, 8th edition, Floyd and Jain, Pearson Education India, 2005
4. Fundamentals of Digital Circuits, 4th edition, Anand Kumar, PHI Learning Pvt. Ltd.
5. Electronic Devices and Circuit Theory, 11th edition, Boylestad, Robert. L, Louis Nashelsky, Pearson Education
6. Power Electronics Mohan Ned, John Wiley & Sons Inc
7. Stepper Motors: Fundamentals, Applications and Design, V. V. Athani, New Age International, 1997.

8. Electric Motors and Drives Fundamentals, Types and Applications, 3rd Edition, Austin Hughes, Newnes Publisher.
9. Brushless Servomotors: Fundamentals and applications, Sakan Kinoshita and Yasuhiko Dote, Oxford University Press,1990.

12.6.2 Reference Books

1. Basic Electrical Engineering, S. N. Singh, PHI, 2011
2. Basic Electrical Engineering, 2nd edition, V. N. Mittal and Arvind Mittal, Tata McGraw Hill
3. Electrical Engineering Fundamentals, Vincent Del Toro, PHI Second edition, 2011
4. Electrical and Electronic Technology, 10th edition Edward Hughes, Pearson Education
5. Theory and Problems of Basic Electrical Engineering, 13th edition, D P Kothari and I J Nagrath, PHI, 2011.
6. Introduction to Electrical Engineering, M. Naidu, S. Kamakshaiah, McGraw-Hill Education, 2004
7. S. N. Singh, "Basic Electrical Engineering" PHI, 2011

13 Basic Electrical and Electronics Engineering Lab (FE0_ESC_BEE_L003)

13.1 Teaching Scheme

Course Code	Course Name	Contact Hours	Credits
FE0_ESC_BEE_L003	Basic Electrical and Electronics Engineering Lab	02	01

13.2 Examination and Evaluation Scheme

Evaluation	ISE	PE	OrE	PrE	Total
Marks	25	25	0	0	50

13.3 Course Objectives

S. No.	Objectives
1	To impart the basic concept of network analysis and its application
2	To provide the basic concept of AC circuit analysis and its application.
3	To illustrate the operation of the transformer and machines
4	To explain the characteristics of BJT.
5	To introduce logic gates

13.4 Course Outcomes

Sr No	Outcomes
	The students will be able to:
CO1	*apply* and verify various theorems to DC network
CO2	*identify* the given passive element by analysing frequency-current characteristics
CO3	*implement* and *analyse* half and full wave rectifiers
CO4	*implement* and *analyse* transistor configuration
CO5	*classify* basic logic gates and *implement* them using universal gates

13.5 Course Contents

S. No.	Suggested List of Experiments
1.	To verify various network theorems
2.	To identify passive elements on the basis of their frequency response
3.	To study half wave rectifiers
4.	To plot input/ output characteristics of BJT
5.	To verify the truth table of basic logic gates
6.	To simulate and analyze the performance of single-phase transformer
7.	To simulate and analyze the performance of full wave rectifiers
8.	To simulate the implementation of basic logic gates using universal gates.

Note: Lab course shall consist minimum of 08 experiments covering the syllabus of corresponding theory course but not limited to the suggested list.

13.6 Suggested Learning Resources

13.6.1 Textbooks

1. Theory and Problems of Basic Electrical Engineering, 13th edition, D P Kothari and I J Nagrath, PHI, 2011
2. Basic Electrical Engineering, 2nd edition, B.R Patil, Oxford Higher Education

4. Electrical and Electronic Technology, 10th edition Edward Hughes, Pearson Education
5. Theory and Problems of Basic Electrical Engineering, 13th edition, D P Kothari and I J Nagrath, PHI, 2011.
6. Introduction to Electrical Engineering, M. Naidu, S. Kamakshaiah, McGraw-Hill Education, 2004

14 Engineering Mechanics (FE0_ESC_EME_T004)

14.1 Teaching Scheme

Course Code	Course Name	Contact Hours	Credits
FE0_ESC_EME_T004	Engineering Mechanics	03	03

14.2 Examination and Evaluation Scheme

Formative Assessment		Summative Assessment				Total Marks
ISE		MSE		ESE		
Marks	Duration	Marks	Duration (Hrs.)	Marks	Duration (Hrs.)	
20	CA	20	1	60	2.5	100

14.3 Course Objectives

S. No.	Objective
1	To familiarize the concept of different types of force systems.
2	To understand the concept of equilibrium of bodies subjected to different types of loads and supports.
3	To familiarize the concepts of the force of friction and forces induced in Truss members.
4	To familiarize with the different types of robots and its end effectors.
5	To understand concepts of forward and inverse kinematics in robots.

14.4 Course Outcomes

The student will be able to:	
CO1	*apply* the mathematical techniques and physical sciences to *identify* the system of forces and *solve* for their resultant.
CO2	*construct* free-body diagrams for a given physical system, *formulate* equilibrium conditions, and *calculate* the reactive forces.
CO3	*demonstrate* an understanding of the concept of friction and *apply* the same to solve problems related to wedges and ladders as well as will be able to *calculate* the support reactions and internal forces induced in members of a truss.
CO4	*apply* the knowledge of physical sciences and mathematical techniques to *develop* and *interpret* the relationship between the position, velocity, and acceleration of a particle and *analyze* the motion by plotting them, as well as be able to *understand* and classify different types of robots.
CO5	*understand* the concept of the Instantaneous Centre of Rotation for a rigid body in general plane motion and *apply* the same to find velocities of various links of a four-bar mechanism as well as be able to *understand* basic concepts of forward and inverse kinematics in robots.

14.5 Course Contents

Module	Unit	Detailed Contents	Hours
	Prerequisites		01
		Basics of algebra, geometry, trigonometry, calculus, Newton's laws	

			of motion.	
1		**Resultant of Various Force Systems**		07
	1.1	System of Coplanar Force System: Introduction to Mechanics, resolution of forces, moment of a force about a point, couples, force couple system.		
	1.2	Resultant of Coplanar Force System: Concurrent, Non-concurrent, and Parallel Force System, Varignon's theorem, principle of transmissibility, centroid		
2		**Equilibrium of Coplanar Force Systems**		08
	2.1	Equilibrium of System of Coplanar Forces: Conditions of equilibrium for concurrent forces, parallel forces, and non-concurrent non-parallel general forces and Couples. Equilibrium of rigid bodies-free body diagrams.		
	2.2	Equilibrium of Beams: Types of beams, type of supports, and reaction: Determination of reactions at supports for various types of loads on beams. (Excluding problems on internal hinges)		
3		**Friction and Trusses**		08
	3.1	Friction: Introduction to Static and Kinetic Friction, Laws of dry friction, Angle of Friction, Angle of repose, concept of Cone of friction. Equilibrium of bodies on an inclined plane. Application to problems involving wedges and ladders.		
	3.2	Truss Analysis: Analysis of forces in members of truss by method of joints and method of sections		
4		**Kinematics and Robotics**		08
	4.1	Kinematics of Particles: Motion of particle with variable acceleration. General curvilinear motion, normal and tangential components of acceleration, Motion curves (a-t, v-t, s-t curves).		
	4.2	Introduction to Robotics: Introduction to Robots, Types of Robots, types of joints in Robots, Robot Degrees of Freedom, robot work volume, Robot Configuration, Introduction to End effectors and its types.		
5		**Robot Kinematics**		07
	5.1	Robot Kinematics: Translation, Rotation, and General Plane motion of Rigid body, Velocity analysis of rigid body using ICR, Forward and Inverse Kinematics.		
		Total Hours		39

FE0_ESC_EME_L004	Engineering Mechanics Lab	02	01

15.2 Examination and Evaluation Scheme

Evaluation	ISE	PE	OrE	PrE	Total
Marks	25	25	0	0	50

15.3 Course Objectives

S. No.	Objective
1	To familiarize the concept of different types of force systems.
2	To understand the concept of equilibrium of bodies subjected to different types of loads and supports.
3	To familiarize the concepts of the force of friction and forces induced in Truss members.
4	To familiarize with the different types of robots and its end effectors.
5	To understand concepts of forward and inverse kinematics in robots.

15.4 Course Outcomes

The students will be able to:	
CO1	*apply* the mathematical techniques and physical sciences to verify the Law of Moments.
CO2	*construct* free-body diagrams for a given physical system, formulate equilibrium conditions, and calculate the reactive forces.
CO3	*demonstrate* the scientific principles of friction and *apply* the concepts of friction to find the coefficient of friction.
CO4	*apply* the physical sciences and mathematical techniques to *develop* and *interpret* the relationship between position, velocity and acceleration of a particle and *analyze* the motion by equating them.
CO5	*apply* the mathematical techniques and concept of the instantaneous center of rotation to find the velocity of links.

15.5 Course Contents

S. No.	Suggested List of Experiments
1	To Verify the Polygon law of forces, using Force Board Apparatus
2	To verify the Law of Moments (Varignon's Theorem) using the Bell Crank Lever Apparatus
3	To verify the conditions of equilibrium of a system of coplanar parallel forces by using a simply supported beam and finding the support reactions.
4	Determination of centroid of different plane laminas
5	Determination of Coefficient of Friction between two surfaces by using horizontal plane method

6	To determine the Coefficient of Friction between two surfaces by using inclined plane method
7	To calculate the final velocity of a body performing the projectile motion.
8	To study the Instantaneous Centre of Rotation (ICR) and to determine the velocity of links by using the ICR method.
	Simulation Experiments
9	To calculate the resultant of Concurrent Force system / Parallel Force system .
10	To determine the support reactions of a simply supported beam.
11	To find the minimum and maximum effort required to move a block kept on rough inclined surface.
12	To calculate the linear velocity and angular velocity of a general plane motion
13	To analyze the forces in a simple roof truss
14	To analyze the motion of robotic arms for different configuration of robots.

Note: Lab course shall consist minimum of 08 experiments covering the syllabus of corresponding theory course but not limited to the suggested list.

7	Mechanical Engineering	FE0_PCC_WLD_L201	Program Core Lab – Welding

16 Program Core Lab - Data Analytics (FE0_PCC_DAT_L201)

16.1 Teaching Scheme

Course Code	Course Name	Contact Hours	Credits
FE0_PCC_DAT_L201	Program Core Lab - Data Analytics	04	02

16.2 Examination and Evaluation Scheme

Evaluation	ISE	PE	OrE	PrE	Total
Marks	50	25	-	-	75

16.3 Course Objectives

S. No.	Objective
1	To Equip students with foundational data analysis skills using industry-standard tools like Excel, Python, and Power BI.
2	To enable students to apply data analysis techniques across different platforms, understanding the strengths and limitations of each.
3	To teach students essential data cleaning and preprocessing techniques to prepare raw data for analysis in various environments.
4	To introduce students to basic statistical concepts and how to implement them in Excel, Python, and Power BI.
5	To develop students' ability to visualize data effectively, using the specific features of Excel, Python's visualization libraries, and Power BI's interactive capabilities.

16.4 Course Outcomes

The students will be able to:	
CO1	*perform* loading, cleaning, and preprocessing of data in Excel, Python, and Power BI.
CO2	*perform* basic descriptive statistical analysis and interpret the results.
CO3	*create* and customize charts, graphs, and visualizations of data.
CO4	*select* the appropriate tool for specific data analysis needs based on the task requirements and dataset characteristics.
CO5	*perform* end-to-end data analysis starting from raw data in Excel, advanced processing in Python, and final reporting in Power BI.

16.5 Course Contents

S. No.	Suggested List of Experiments
1	To introduce students to basic data handling, including sorting, filtering, and summarizing data using Microsoft Excel
2	To teach students how to visualize data effectively using Microsoft Excel
3	To familiarize students with the importance of data cleaning using Microsoft Excel
4	To introduce the concepts of correlation and covariance using Microsoft Excel
5	To introduce students to the Pandas library for data manipulation and to teach them how

	to aggregate and group data.
6	To teach data cleaning techniques using Python.
7	To introduce students to basic data visualization techniques using Matplotlib library.
8	To perform descriptive statistical analysis on a dataset using Python.
9	To familiarize students with the Power BI interface and how to load data.
10	To teach students how to clean and transform data using Power BI's Query Editor.
11	To introduce students to basic data visualizations in Power BI.
12	To teach students how to interactively explore data using slicers and filters.
13	To teach students how to analyze time series data in Power BI.
14	To introduce students to creating reports with multiple pages in Power BI.
15	To teach students how to use What-If analysis in Power BI.
16	Mini-project on data analysis.

16.6 Suggested Learning Resources

16.6.1 Textbooks

1. Data Analysis Using Microsoft Excel 5.0, Michael R. Middleton, Duxbury Press 2007.
2. Python for Data Analysis" Wes McKinney, O'Reilly Media, Incorporated, 2013.
3. Microsoft Power BI Complete Reference Devin Knight, Brian Knight, Mitchell Pearson, Manuel Quintana, Packt Publishing, 2018.

16.6.2 Reference Books

1. Statistical Analysis: Microsoft Excel 2016 by Conrad Carlberg, Que Publishing, 2018.
2. Think Stats: Exploratory Data Analysis in Python, Allen B. Downey, O'Reilly Media 2014.
3. Mastering Microsoft Power BI: Expert techniques for effective data analytics and business intelligence by Brett Powell, Packt Publishing, 2018.

16.6.3 Web Resources

1. https://www.classcentral.com/course/data-analysis-microsoft-introduction-to-data-anal-6544
2. NPTEL Data Analytics using Python:

17 Program Core Lab - Web Development (FE0_PCC_WDL_L201)

17.1 Teaching Scheme

Course Code	Course Name	Contact Hours	Credits
FE0_PCC_WDL_L201	Program Core Lab - Web Development	04	02

17.2 Examination and Evaluation Scheme

Evaluation	ISE	PE	OrE	PrE	Total
Marks	50	25	-	-	75

17.3 Course Objectives

S. No..	Objective
1	To enable learner to develop static webpages using HTML tags.
2	To teach learner styling of webpages using CSS.
3	To guide learner in developing a static website using WordPress.
4	To familiarize learner with client-side verification of forms using JavaScript.
5	To train learner in development of dynamic user interfaces using React.

17.4 Course Outcomes

The learner will be able to:	
CO1	*apply* appropriate HTML tags to *design* a static webpage.
CO2	*develop* styles for webpages using CSS.
CO3	*create* and *publish* a static website using WordPress.
CO4	*design* forms with client-side verification using JavaScript.
CO5	*develop* dynamic user interface using React.

17.5 Course Contents

S. No..	Suggested List of Experiments
1	**To design a static webpage using Hypertext Text markup Language (HTML)**
	a. Understand and apply HTML tags and attributes
	b. Identify and use basic root HTML tags, formatting tags, table tags, list tags, form tags, link tags and multimedia tags
	c. create static webpages (at least 3) using various HTML tags
2	**To style webpages using Cascading Style Sheets (CSS)**
	a. To style webpages using CSS functions
	b. Design responsive webpages
3	**To design static website using WordPress**
	a. Understand various functions of WordPress

	b.	Create a static website with the help of WordPress functions
	c.	Publish a static website in WordPress
4	**Verification of forms using JavaScript**	
	a.	Apply basic scripting using JavaScript
	b.	Build form for various input types
	c.	Implement client-side verification using JavaScript
5	**Development of dynamic user interface using React**	
	a.	Install and configure React server
	b.	Develop a dynamic user interface using React
6	**Server-side programming with Node.js**	
	a.	Set up a Node.js server
	b.	Handle basic GET and POST requests
7	**Database integration with web application**	
	a.	Connect a Node.js server to a database (e.g., MongoDB or MySQL).
	b.	Perform basic CRUD (Create, Read, Update, Delete) operations.
8	**Implementing Web Application Programming Interfaces (APIs)**	
	a.	Fetch data from a public API and display it on a web page.
	b.	Handle API responses and display dynamic content.
9	**Design user interface using wireframing and prototyping**	
	a.	Create wireframes for a web or mobile application using tools like Figma or Sketch
	b.	Develop a clickable prototype to demonstrate user flow and interactions.
10	**Basics of web security**	
	a.	Implement basic security measures like input sanitization.
	b.	Explore common web vulnerabilities (e.g., SQL injection, XSS) and how to prevent them.

17.6   Suggested Learning Resources

17.6.1 Textbooks

1. HTML 5 Black Book, II Ed, DT Editorial Services, 2016
2. HTML, CSS, and JavaScript All in One, Sams Teach Yourself, III Ed., Pearson, 2020
3. React: Up and Running: Building Web Applications, II Ed, O'Reilly, 2021
4. WordPress Complete, VI Ed, Packt, 2017

17.6.2 Reference Books

1. JavaScript: The Good Parts, I Ed., Douglas Crockford, O'Reilly, 2008
2. HTML & CSS: The Complete Reference, V Ed., Thomas A. Powell, McGraw Hill, 2010
3. Professional WordPress: Design and Development, III Ed. Brad Williams, David Damstra, Hal Stem, Wrox- A Wiley Brand, 2015

   https://www.geeksorg/web-development/

18 Program Core Lab – Analog and Digital Integrated Circuits Lab (FE0_PCC_ADC_L201)

18.1 Teaching Scheme

Course Code	Course Name	Contact Hours	Credits
FE0_PCC_ADC_L201	Analog and Digital Integrated Circuits Lab	04	02

18.2 Examination and Evaluation Scheme

Evaluation	ISE	PE	OrE	PrE	Total
Marks	50	25	-	-	75

18.3 Course Objectives

S. No.	Objective
1	To synthesize logic circuits using logic gates.
2	To acquire the knowledge of combinational circuits.
3	To understand the concept of sequential circuits.
4	To explain the applications of operational amplifiers.
5	To describe the mode of operations of IC 555 timer.

18.4 Course Outcomes

The students will be able to:	
CO1	*realize* Boolean expressions using logic gates.
CO2	*construct* and *verify* applications using combinational circuits.
CO3	*design* and *demonstrate* applications of sequential circuits.
CO4	*analyze* and *develop* applications using operational amplifier.
CO5	*design* and *test* applications using IC555 timer.

18.5 Course Contents

S. No.	Suggested List of Experiments
1	To design, simulate and verify the logic circuit for a given logical expression using basic gates.
2	To minimize the given logical expression and design the logic circuit using universal gates.
3	To design, simulate and implement half/full adder and half/full subtractor using basic gates and XOR gate.
4	To design, simulate and implement half/full adder and half/full subtractor using universal gates.
5	To design, simulate and verify 4:1 and 8:1 multiplexer and 1:4 and 1:8 demultiplexer.
6	To design, simulate and verify higher-order multiplexer using lower-order multiplexers.
7	To design, simulate and implement Binary to Gray code converter.
8	To design, simulate and implement BCD to Excess-3 code converter.
9	To design and simulate 4-bit synchronous counter.
10	To design and simulate serial in/serial out shift register.

11	To design and test inverting and non-inverting amplifier using IC 741.
12	To design and test a comparator using IC 741.
13	To design and test zero crossing detector using IC 741.
14	To design and implement a square wave generator using IC 555.
15	To design and implement pulse width modulator using IC 555.

18.6 Suggested Learning Resources

18.6.1 Textbooks

1. Digital Design, 4th Edition, M. Morris Mano and Michael D. Ciletti, Pearson Education, 2008.
2. Digital Logic Applications and Design, 1st Edition, John M. Yarbrough, Thomson Publications, 2006.
3. Op-Amps and Linear Integrated Circuits, 4th Edition, Ram A, Gayakwad, Prentice Hall of India, 2021.
4. Electronic Devices and Circuit Theory, 10th Edition, Robert Boylestead and Louis Nashelsky, Pearson Education, 2009.

18.6.2 Reference Books

1. Digital Design Principles and Practice, 4th Edition, John F. Wakerly, Pearson Publications, 2008.
2. Modern Digital Electronics, 4th Edition, R.P. Jain, Tata McGraw Hill, 2008.
3. Fundamentals of Logic Design, 7th Edition, Roth and Kinney, Cengage Learning, 2013.
4. Linear Integrated Circuits, 4th Edition, D. Roy Choudhury and S. B. Jain, New Age International Publishers, 2017.

18.6.3 Web Resources

19 Program Core Lab – Elements of Electrical and Electronics System. (FE0_PCC_EEE_L201)

19.1 Teaching Scheme

Course Code	Course Name	Contact Hours	Credits
FE0_PCC_EEE_L201	Program Core - Elements of Electrical and Electronics System Lab	04	02

19.2 Examination and Evaluation Scheme

Evaluation	ISE	PE	OrE	PrE	Total
Marks	50	25	-	-	75

19.3 Course Objectives

Sr. No.	Objective
1	To enable learners with the knowledge of different conventional and non-conventional energy sources.
2	To elaborate various types of transmission lines
3	To discuss different types of energy storage devices along with their characteristics
4	To familiarize learners with the measurement of various electrical parameters
5	To train learners to use different ICs for specific electrical applications

19.4 Course Outcomes

Sr. No	Outcomes
The students will be able to	
CO1	*illustrate* the basics of solar PV (photovoltaic) cell and plot its characteristics
CO2	*explore* transmission line to calculate receiving end voltage under varying load conditions.
CO3	*perform* experiment to plot the charging and discharging characteristic of energy storage device
CO4	*identify* various methods used for measurement and power factor improvement in AC circuit
CO5	*demonstrate* the effective use of op-amp, voltage regulator circuits, and different ICs for various electrical applications

19.5 Course Contents

S. No.	Suggested List of Experiments
1	To perform and plot VI Characteristics of Solar PV Panel.
2	To study a short transmission line and calculate various transmission line parameters.
3	To study the different types of energy storage and plot characteristics of energy storage device .
4	To perform and measure various electrical quantities in a single phase and three phase circuit.
5	To study the various power factor improvement techniques and calculate the powerfactor using any one power factor improvement method.

6	To study and implement a circuit using op-amp.
7	To implement a voltage regulator circuit to maintain constant DC voltage at the output.
8	To perform speed control of DC Motor using IC LM317.
9	To simulate MPPT characteristics of Solar photovoltaic system using MATLAB.
10	To measure the transmission parameters and quantities for long, medium, and short transmission lines using MATLAB.
11	To simulate and analyze battery characteristics using MATLAB.
12	To perform a case study on calculation of electricity bill for any one installation

Note: Minimum 10 experiments need to be conducted.

19.6   Suggested Learning Resources

19.6.1   Textbooks

1. Mahesh Verma, Power Plant Engineering, Metrolitan Book Co Pvt Ltd
2. RK Rajput, A Text Book of Power System Engineering, Laxmi Publication
3. D. P. Kothari, I. J. Nagrath, Power System Engineering, 3 Edition, Mc GrawHill
4. B.R. Gupta, Power System Analysis And Design, S.Chand
5. Mehta V.K., Principles of Power System, S Chand
6. AK Sawhney, Electrical & Electronic Measurements and Instrumentation, Dhanpat Rai & Sons

20 Program Core Lab –Elements of Electronics and Telecommunication Engineering (FE0_PCC_EET_L201)

20.1 Teaching Scheme

Course Code	Course Name	Contact Hours	Credits
FE0_PCC_EET_L201	Program Core Lab - Elements of Electronics and Telecommunication Engineering	04	02

20.2 Examination and Evaluation Scheme

Evaluation	ISE	PE	OrE	PrE	Total
Marks	50	25	-	-	75

20.3 Course Objectives

S. No.	Objective
1	To introduce the fundamentals of transmitter, receiver and channel in basic communication system.
2	To make the learners understand the basic concepts of line codes, modulation and channel codes of digital communication system
3	To introduce fundamental building blocks of digital electronics.
4	To make the learners understand the role of various sensors in IoT applications
5	To teach learners the construction of computer communication network

20.4 Course Outcomes

The students will be able to:	
CO1	*emphasize* the significance of basic building blocks of communication system
CO2	*interpret and analyze* the importance of converting the analog data to digital.
CO3	*learn* the functionality of logical gates in building a digital circuit
CO4	*select* the sensor to gather specific information about their surroundings by detecting physical quantities
CO5	*explore* various networking devices required to construct a computer network.

20.5 Course Contents

S. No.	Suggested List of Experiments
1	To demonstrate the basic communication system.
2	To generate AM wave using MATLAB.
3	To convert an analog signal to digital using pulse code modulation.
4	To setup and observe waveforms for NRZ and RZ line codes.
5	To setup ASK modulation and demodulation block and observe the waveforms.
6	To simulate non-systematic cyclic channel code using Python.
7	To implement the Boolean function using basic logic gates.
8	To implement combinational circuits using logic gates.

9	To understand the functionality of the sensors in IoT applications.
10	To understand the role of IP address using static and dynamic IP addressing.
11	To set-up and simulate local area network (LAN) using Cisco packet tracer.
12	To understand resource sharing in LAN using web server.

21 Program Core Lab – Welding (FE0_PCC_WLD_L201)

21.1 Teaching Scheme

Course Code	Course Name	Contact Hours	Credits
FE0_PCC_WLD_L201	Program Core Lab – Welding	04	02

21.2 Examination and Evaluation Scheme

Evaluation	ISE	PE	OrE	PrE	Total
Marks	50	25	-	-	75

21.3 Course Objectives

S. No.	Objective
1	To introduce students to various welding processes and their applications in industry.
2	To ensure students understand and adhere to safety protocols and operational procedures when using welding equipment.
3	To develop skills in executing different welding techniques, including joint preparation and metal fusion.
4	To provide hands-on experience in welding inspection techniques, including visual inspection and non-destructive testing methods.

21.4 Course Outcomes

The students will be able to	
CO1	*develop* the necessary skills required to use different tools of Fitting Shop.
CO2	*classify* the welding processes, analyze the physics of the welding arc, and identify various welding tools.
CO3	*practice* safety measures during different welding operations.
CO4	*understand* and practice different electric arc welding techniques.
CO5	*make use* of some of the Non-destructive testing (NDT) methods for inspecting weld joints.

21.5 Course Contents

Ex. No.	Suggested List of Experiments
1	To demonstrate and use the measuring and marking tools for precision fitting of the workpiece.
2	To demonstrate and practice the sawing and filing operations.
3	To classify various welding processes and demonstrate associated equipment/tools.
4	To understand power sources and heat flow in welding operations.
5	To understand and imbibe safe welding practices.
6	To demonstrate and practice different electric arc welding techniques.
7	To identify different arc welding equipment/tools.
8	To demonstrate the use of arc welding electrodes and operate different welding equipment.

9	To understand different weld joints and practice them on workpieces.
10	To understand and demonstrate various Non-Destructive Testing (NDT) techniques for welding defects.
11	Course Project based on above topics.

21.6 Suggested Learning Resources

21.6.1 Textbook:

1. A Textbook of Welding Technology, Revised Edition, O.P. Khanna, Dhanpat Rai Publishing Co Pvt Ltd, 2021.
2. Manufacturing Technology, Vol. 1, 5th Edition, P. N. Rao, McGraw Hill Education India Private Limited, 2019.
3. Welding Processes and Technology, 2nd Edition, Dr. R.S. Parmar, Khanna Publishers, Delhi (India), 1997

21.6.2 Reference books:

1. Welding Handbook, 9th Edition, American Welding Society, American Welding Society, 2020
2. Metals and How to Weld Them, 2nd Edition, Jefferson Davis, Industrial Press, Inc., 1999

Marks	50	-	-	-	50

22.3 Course Objectives

S.No.	Objectives
1	To understand the fundamentals of Computer Engineering and Information Technology
2	To impart the skills of Electrical and Electronics Engineering
3	To train learner with basic skills of Fitting and Sheet Metal Working

22.4 Course Outcomes

The students will be able to:	
CO1	*perform* basic troubleshooting and maintenance of personal computers.
CO2	*create* and *edit* documents and *analyze* data using suitable tools.
CO3	*practice* safety measures and wiring standards with respect to electrical equipment
CO4	*design* and *fabricate* printed circuit board
CO5	*create* a job using techniques such as fitting and sheet metal working.

22.5 Course Contents

Ex. No.	Suggested List of Experiment
1	To perform basic troubleshooting and maintenance of personal computers and laptops.
2	To design webpages using web technologies such as HTML, CSS, java Script Bootstrap and XML
3	To prepare technical reports using documentation tools.
4	To assemble and test an end-to-end Internet of Things (IoT) system for room temperature control using Arduino
5	To study the earthing system and measure the earth resistance, electrical safety devices, their specifications and applications,
6	To study electrical service connections and electrical wiring techniques
7	To study the circuit simulation software and understand the process of Printed Circuit Board (PCB) fabrication.
8	To design, assemble and test the circuit on PCB.
9	To use various fitting operations to create a male-female joint.
10	To demonstrate sheet metal operations using essential tools with safety precaution to create a job work.

FE0_SEC_PYP_T202	Python Programming	02	02

23.2 Examination and Evaluation Scheme

Formative Assessment		Summative Assessment				Total Marks
ISE		MSE		ESE		
Marks	Duration	Marks	Duration (Hrs.)	Marks	Duration (Hrs.)	
15	CA	15	1	45	2	75

23.3 Course Objectives

S. No.	Objective
1	To introduce basics of Python including data types, operators, input/output.
2	To explain control flow statements, looping statements and functions.
3	To familiarize learners with the basics object-oriented programming concepts.
4	To introduce the concepts of modules, packages, file handling and advanced libraries.
5	To teach the design of Graphical User Interface (GUI) with database connectivity.

23.4 Course Outcomes

The student will be able to:	
CO1	*use* basic structure, syntax and semantics of the Python programming language.
CO2	*apply* different decision-making statements and functions.
CO3	*demonstrate* the knowledge of object-oriented programming in Python.
CO4	*exploit* the tool like modules, packages, file handling and advanced libraries.
CO5	*develop* Graphical User Interface (GUI) along with database connectivity.

23.5 Course Contents

Module	Unit	Detailed Contents	Hours
		Prerequisites	**01**
		Data types, variables, constants, functions, basic object oriented concepts	
1		**Basics of Python:**	**05**
	1.1	Introduction: Features of Python, Comparison of Python with C/C++	
	1.2	Python building blocks: Identifiers, Keywords, Indention, Variables and Comments, Basic data types, Operators, Input-output, string	
	1.3	Sequence data types: List, tuple, set and dictionary	
2		**Control statements & functions:**	**05**
	2.1	Control flow statements: a) Conditional statements (if, if...else, nested if) b) Looping in Python (while loop, for loop, nested loops) c) Loop manipulation using continue, pass, break.	

	2.2	Functions: a) Built -in functions in python b) User defined functions c) Recursive functions d) Anonymous Functions (Lambda, Map, Reduce, Filter)	
3		**Object oriented programming concepts:**	**05**
	3.1	Classes and objects: Creating a class, encapsulation, self variable, constructors	
	3.2	Methods: Types of methods, inner classes, constructors in inheritance, Polymorphism, Abstraction, Interfaces in Python.	
	3.3	Exceptions Handling: Errors in a Python program, exceptions, Exception handling, Types of exceptions.	
4		**Modules, packages and file handling**	**05**
	4.1	Modules: Writing modules, importing objects from modules, Python built-in modules (e.g. Numeric and Mathematical module, Functional Programming module	
	4.2	Packages: creating user defined packages and importing packages.	
	4.3	File handling: Opening file in different modes, closing a file, writing to a file, accessing file contents using standard library functions, reading from a file, Renaming and Deleting a file, File Exceptions.	
5		**Graphical user interface and data handling**	**05**
	5.1	Graphical user interface (GUI): GUI creation in python using Tkinter module, creating Canvas, Frame and Widgets, file operations using Tkinter	
	5.2	Data handling using advanced libraries: Data processing using Pandas (excel/csv files), Data calculation using NumPy, Data visualization using Matplotlib	
		Total Hours	**26**

23.6 Suggested Learning Resources

23.6.1 Textbooks

1. Introduction to Computing and Problem Solving using Python, I Ed, E. Balagurusamy, McGraw Hill Education India Private Limited, 2016
2. Beginning Python, I Ed, James Payne, Wrox Publication, 2011
3. Python: The Complete Reference, Martin C. Brown, McGraw Hill Education, 2018
4. Learning Python, V Ed, 5th Edition, O'Reilly, 2009

23.6.2 Reference Books

1. Introduction to Computing and Programming in Python-Multimedia Approach, IV Ed. Mark J. Guzdial
2. Python Programming Using Problem Solving Approach, I Ed, Reema Thareja, Oxford University Press, 2017
3. Introduction to Computing & Problem Solving with Python, I Ed, Jeeva Jose, P. Sojan Lal, Khanna Computer Book Store, 2019
4. Core Python Applications Programming, III Ed, Wesley J. Chun, Pearsons, 2019

23.6.3 Web Resources

1. Ebook: A Smarter Way to Learn Python: Mark Myers
   https://tinyurl.com/k2zh2vkd
2. NPTEL Lecture Series: Computational Science and Engineering using Python, by Dr. Mahendra Vera, IIT Kanpur

   https://archive.nptel.ac.in/noc/courses/noc17/SEM1/noc17-ph02/

24 Python Programming Lab (FE0_SEC_PYP_L202)

24.1 Teaching Scheme

Course Code	Course Name	Contact Hours	Credits
FE0_SEC_PYP_L202	Python Programming Lab	02	01

24.2 Examination and Evaluation Scheme

Evaluation	ISE	PE	OrE	PrE	Total
Marks	25	25	0	0	50

24.3 Course Objectives

S. No.	Objective
1	To *introduce* basics of Python programming including data types, operators, input/output.
2	To *familiarize* learners with control flow statements, looping statements, function declaration and function calling.
3	To *introduce* object-oriented programming concepts in Python.
4	To make the learners *understand* the concepts of modules, packages, file handling and advanced libraries.
5	To *teach* learners the development of Graphical User Interface (GUI) along with data handling

24.4 Course Outcomes

The students will be able to:	
CO1	*use* basic structure, syntax and semantics of the Python programming language.
CO2	*apply* different decision-making statements and functions.
CO3	*demonstrate* the knowledge of object-oriented programming in Python.
CO4	*explore* the tool like modules, packages, file handling and advanced libraries.
CO5	*develop* GUI along with data handling.

24.5 Course Contents

Ex. No.	Suggested List of Experiments
1	A Python program to use various basic data types, operators and input/output statements
2	A Python program based on strings, lists, dictionaries, sets and tuples
3	A Python program based on conditional statements
4	A Python program to demonstrate the use of looping
5	A Python program based on concepts of functions
6	A Python program based on classes, objects and constructors
7	A Python program based on inheritance, polymorphism and interface
8	A Python program based on exception handling
9	A Python program based on file handling

10	A Python program based on modules and packages
11	A Python program for creating GUI and file operations with excel/csv file
12	A Python program to use NumPy and Pandas libraries
13	A Python program to visualize data using Matplotlib library
14	A mini-project based on real life applications

Note: Lab course shall consist minimum of 08 experiments covering the syllabus of corresponding theory course but not limited to the suggested list.

S. No.	Course Type	Subject Code	Courses	Group I Semester	Group II Semester	Credits
1	AEC	FE0_AEC_CSE_T001	Communication Skills and Ethics	II	I	3
2	IKS	FE0_IKS_***_T001	Indian Knowledge System	II	I	2
V. Total Humanities Social Science and Management (HSSM) Credits in First Year						**5**

Basket of courses offered under Indian Knowledge System (IKS)

S. No.	Code	Title of the Indian Knowledge System Course
1	FE0_IKS_ESE_T001	Environmental Science and Engineering
2	FE0_IKS_TPW_T001	Principles of Town Planning and Water Management
3	FE0_IKS_TAC_T001	Trade and Commerce

25 Communication Skills and Ethics (FE0_AEC_CSE_T001)

25.1 Teaching Scheme

Course Code	Course Name	Contact Hours	Credits
FE0_AEC_CSE_T001	Communication Skills and Ethics	03	03

25.2 Examination and Evaluation Scheme

Formative Assessment		Summative Assessment				Total Marks
ISE		MSE		ESE		
Marks	Duration	Marks	Duration (Hrs.)	Marks	Duration (Hrs.)	
20	CA	20	1	60	2.5	100

25.3 Course Objectives

S. No.	Objective
1	To improve learners' comprehension skills using effective listening strategies and efficient reading comprehension techniques.
2	To optimize oral communication prowess by refining pronunciation, vocabulary, non-verbal cues, and public speaking.
3	To equip participants with essential skills in professional communication and technical writing, focusing on email etiquette, business correspondence, and drafting project proposals.
4	To equip participants with essential skills in utilizing digital presentation tools to design and deliver engaging presentations
5	To develop an understanding of responsible use of social media and ethical communication practices in professional settings.

25.4 Course Outcomes

The student will be able to:	
CO1	*demonstrate* listening and reading comprehension skills in academic and professional contexts
CO2	*exhibit* oral communication skills by delivering proper public speeches using correct vocabulary, pronunciation and non-verbal cues.
CO3	*draft* concise and effective business letters and project proposals
CO4	use digital presentation tools to *create* dynamic presentations and be able to optimize their LinkedIn profile to enhance visibility and networking opportunities.
CO5	*demonstrate* responsible use of social media, apply ethical principles in written communication, and exhibit professional behavior in various workplace scenarios

25.5 Course Contents

Module	Unit	Detailed Contents	Hours
	Prerequisites		

		Basic Knowledge of English language	
1	**Listening and Reading Skills**		**05**
	1.1	Techniques of Effective Listening: Importance of listening as a Skill and its advantages, Strategies for effective listening.	
	1.2	Reading Skills and Note taking: Techniques of effective reading, Exemplifying the concepts: Skimming, Scanning, active reading, speed reading, Survey-Question-Read-Recite-Review (SQ3R) Styles and techniques of Note taking – including graphic organizers.	
	1.3	Methods to develop Listening and Reading Comprehension: Active listening exercises, interactive and Real life practice, reflection and Feedback	
2	**Speaking Skills**		**05**
	2.1	Oral Communication: Stress and intonation, tips and tricks for Practice Vocabulary Common Errors and Fluency: synonyms and antonyms, Homographs, Homophones, Homonyms, Heteronyms, identifying and rectifying errors	
	2.2	Non-verbal Communication: kinesics, proxemics, paralanguage, oculesics, haptics	
	2.3	Art of Public Speaking: types and strategies, effective use of verbal and non-verbal aspects, techniques to overcome public speaking anxiety	
3	**Writing Skills**		**06**
	3.1	Principles and strategies for effective writing: e-mail etiquette Business correspondence in full block format: permission letters, complaint Letters, adjustment letters	
	3.2	Introduction to Technical Writing and Reports: understanding basics of technical writing, difference between technical and other forms of writing, framing definitions and instructions. Drafting Clear and Concise Technical Documents: components, structure and format of project proposal, drafting a project proposal	
4	**Digital tools for Presentation Skills**		**05**
	4.1	Digital Tools for Presentation: introduction to digital presentation tools (Canva, Prezi, Mentimeter, such free AI tools), strategies for designing and delivering presentations confidently	
	4.2	Basics of Digital Marketing Creating Effective LinkedIn profile	
5	**Professional Ethics and Behaviour Management**		**05**
	5.1	Ethics and Etiquette on social media: respect others' privacy, think before you post, be honest and authentic, respect diverse viewpoints give credit where it is due, maintain professionalism, protect yourself and others.	
	5.2	Addressing plagiarism: proper citation and use of images, etc. in written work, use of Plagiarism software	
	5.3	Professional Behaviour Management: ethical decision making, showing respect, accepting criticism, demonstrating flexibility and cooperation Professional Etiquette: dressing etiquette, cubicle etiquette and cell phone etiquette	
		Total Hours	**26**

26 Environmental Science and Engineering (FE0_IKS_ESE_T001)

26.1 Teaching Scheme

Course Code	Course Name	Contact Hours	Credits
FE0_IKS_ESE_T001	Environmental Science and Engineering	02	2

26.2 Examination and Evaluation Scheme

Evaluation	ISE	PE	OrE	PrE	Total
Marks	50	0	0	0	50

26.3 Course Objectives

S. No.	Objective
1	To introduce the necessity of natural and ecological resources and their management.
2	To provide overview major environmental pollution related to water, air and land.
3	To learn the various environmental concerns and possible solutions.
4	To provide an overview on national and international laws, treaties and conventions for sustainable environment.

26.4 Course Outcomes

The student will be able to:	
CO1	*explain* the meaning of Environment, Ecosystems, Energy flow and role of Indian culture in conservation of environment.
CO2	*understand* the Basic methodology for water distribution and collection of waste water & treatment
CO3	*identify* the air and Land pollution and justify the use of controlling and treatment methods
CO4	students will be able to *describe* the various Global Environmental Concerns
CO5	students will be able to *explain* major environmental national legislations, international treaties and convention and roles of governmental agencies in the protection of environment

26.5 Course Contents

Module	Unit	Detailed Contents	Hours
1		**Environment, Ecology and Ancient India:**	**05**
	1.1	Introduction and definition of environment, ancient Indian environmental ethics, environmental consciousness in ancient texts, role of Indian culture in environment conservation, scope and importance public awareness and role of engineers	
	1.2	Structure and function of an ecosystem, producers, consumers and decomposers, energy flow in the ecosystem, food chains, food webs and ecological pyramids, ecosystems and interdependence between	

		living organisms, habitats, limiting factors, carrying capacity	
2		**Water & Water Resources**	**06**
	2.1	Classification of water (ground & surface water), water supply and distribution of water, waste water collection, effluent standards	
	2.2	Ancient Indian knowledge in water resources, water shortages in India, water resources and conflicts on its sharing, few case studies in India like Kaveri and Krishna river water disputes, multipurpose river valley projects in India and their environmental and social impacts, case studies of dams - Narmada and Tehri dam issues	
3		**Air Pollution and Solid Waste Management**	**06**
	3.1	Types of pollutants, sources of pollutants, effects on human health, national ambient air quality standards of India	
	3.2	Solid waste terminology, solid waste characteristics, solid waste collection and transportation, solid waste processing and recovery, disposal of solid waste, pollution and its prevention in ancient scriptures	
4		**Role of India in Global Environmental Concerns**	**05**
	4.1	Environmental issues in Indian as well as global context, endangered life-species, loss of biodiversity, global warming, climate change and India	
5		**Indian Environmental Legislations, Authorities & Systems:**	**04**
	5.1	Legislation system in India constitution of India, major international treaties and conventions, national major environmental acts - air (P & CP) act, water (P & CP) act, environment protection act, functions of state / central pollution control boards	
		Total Hours	**26**

27 Principles of Town Planning and Water Management (FE0_IKS_TPW_T001)

27.1 Teaching Scheme

Course Code	Course Name	Contact Hours	Credits
FE0_IKS_TPW_T001	Principles of Town Planning and Water Management	02	2

27.2 Examination and Evaluation Scheme

Evaluation	ISE	PE	OrE	PrE	Total
Marks	50	0	0	0	50

27.3 Course Objectives

S.No..	Objectives
1	To provide the students an overview of Indian Knowledge System (IKS) and the history of town planning and water management.
2	To impart the knowledge of eco-friendly, robust and scientific planning of town in India.
3	To comprehend the techniques water management
4	To study the impact of climate change on town planning and water management

27.4 Course Outcomes

Students will be able to:	
CO1	*familiarize* with the Indian Knowledge System (IKS) for water management and town planning.
CO2	*acquaint* with concept, principle of town planning in Indian cities.
CO3	*compare* the development of towns in different historical eras.
CO4	*discuss* the importance of water management systems and its technology in India.
CO5	*realize* the impact of climate change on town planning and water management.

27.5 Course Contents

Module	Unit No.	Detailed Contents	Hours
1		**Introduction to IKS, Town planning & water Management**	06
	1.1	Indian Knowledge system (IKS)-an introduction, overview and importance	
	1.2	Town Planning: introduction to ancient text in the context of town planning, necessity, origin, growth of town, principles and objects of zoning, Housing, FSI	
	1.3	Water management: classification of water (ground & surface water), characteristics, water demand, water management in ancient India(timeline , terminologies)	
2		**Concepts of Town Planning**	05

	2.1	Concept of neighborhood planning, walk to work and walk to school concept, streets and road planning' widths of hierarchy and patterns of roads, city planning patterns such as grid iron, spider web, circular zoning, understanding development plan (DP) and regional planning.	
	2.2	Residential layouts, open spaces, amenity spaces, different concepts such as urban sprawl, density, twin cities, suburbs, conurbation	
3	**Indian knowledge systems in town planning, 'Nagara Vaastu Shastra'**		06
	3.1	India cities: ancient (vedic, Harappan etc), medieval (Varanasi, Chola dynasty towns etc), pre-independence (Mughals, Vijayanagara, British and Portuguese towns) and post-independence (Chandigarh, New Delhi, Navi Mumbai etc)	
4	**Water Supply & Sanitation**		06
	4.1	Water supply: historical development of water supply and management, urban water infrastructure for drinking water – challenges planning and management, water harvesting, rainwater harvesting, storm water collection and ground water recharge	
	4.2	Sewage & Sanitation: collection, transportation and treatment of sewage, low cost sanitation technologies and concepts as related to Indian context, grey water treatment and recycling, low water consuming fixtures.(aerated taps , dry toilets, etc) drip irrigation for gardening, xeriscaping, indigenous tree plantation, macro to micro level reduce and reuse strategies	
5	**Climate Change and its implications on town planning and water management**		
	5.1	Introduction, future demand and supply of water, impact on town planning and water management.	03
		Total Hours	**26**

27.6 Suggested Learning Resources Textbooks

27.6.1 Textbooks

1. Town planning, 32nd Edition, Rangwala, Charotar Publishing House Pvt. Ltd., 2023
2. Fundamentals of town planning, Hiraskar, 17th Edition, G.K., Dhanpat Rai Publication Pvt. Ltd, , New Delhi
3. Planning Theory (Planning, Environment, Cities), 02nd Edition, Philip Allmendinger, Palgrave Macmillan Publisher, London, 2009
4. Planning the Indian city, Mahesh N. Buch, Vikas Publishing, New Delhi, 1987
5. City planning in India, 1947-2017, Kumar, A., Sanjeev, V., and Prakash, P. (2020) New York.
6. Water supply and waste water engineering, B S N Raju, McGraw-Hill Inc. !995

27.6.2 Reference Books:

1. Infrastructure Planning, Engineering, and Economics, 2nd Edition, McGraw-Hill Education,

2015

2. Urban Water Management for Future Cities, S. Koster, S. Koester, M. Reese, J. Zuo, and J. Zuo, " Urban Springer, 2019

3. Infrastructure Planning and Management: An Integrated Approach, Virendra Proag, Springer, 2021

27.6.3 Web Resources

1. Research study series no 88 "status of water supply, sanitation and solid waste management in urban area", National Institute of Urban Affairs, 2005

28 Trade and Commerce (FE0_IKS_TAC_T001)

28.1 Teaching Scheme

Course Code	Course Name	Contact Hours	Credits
FE0_IKS_TAC_T001	Trade and Commerce	02	2

28.2 Examination and Evaluation Scheme

Evaluation	ISE	PE	OrE	PrE	Total
Marks	50	0	0	0	50

28.3 Course Objectives

S. No..	Objective
1	To introduce students to the fundamental concepts and principles of economics and their application in the context of the Indian economy.
2	To provide an overview of the Indian economy, including key economic indicators and their significance in assessing economic performance.
3	To explore the factors influencing economic growth and development, with a focus on the role of technology, innovation, and sustainable development.
4	To familiarize students with the macroeconomic policies, such as monetary and fiscal policies, and their impact on the Indian economy.
5	To encourage the students to be aware of the negative effects of a bad economy.

28.4 Course Outcomes

The student will be able to:	
CO1	*understand* the basic concepts and principles of economics and their relevance to the Indian economy.
CO2	*analyze* and interpret key economic indicators to assess the performance of the Indian economy
CO3	*evaluate* the factors that contribute to economic growth and development, including the role of technology, innovation, and sustainable practices.
CO4	*analyze* the implications of the digital economy and globalization on India's economic landscape.
CO5	*recognize* the significance of different sectors, such as agriculture, industry, services, and infrastructure, in the economic development of India.

28.5 Course Contents

Module	Unit	Detailed Contents	Hours
1		**Introduction to Indian Trade and Commerce:**	05
	1.1	History of Trade and Commerce in India: Indigenous Banking System, Rise of Intermediaries, Transport, Trading Communities: Merchant Corporations, Major Trade Centers, Major Imports and Exports, Position of Indian Sub-Continent in the World Economy.	
2		**Historical Trade Routes and Markets:**	06

	2.1	Spice Route, Silk Route, Incense Route, Amber Road (Trading beads), Tea Route, Salt Route, Trading across the desert, Bronze Age business (Tin Route), India China and Trade Routes	
3	**Economic Policies and Administration:**		06
	3.1	Introduction, Need for Economic Policy in India, Aims of Economic Policy in India, Instruments of Economic Policy in India, Process of Economic Policy Formulation, Planning Commission of India, Central Statistical Organization, ICSSR, Lobbyists, NGOs, International Politics and Multilateral Lending.	
4	**Commodities and Trade Goods:**		05
	4.1	Types of Commodities, hard commodities, soft commodities, National Commodity and Derivative Exchange (NCDEX), Multi Commodity Exchange of India (MCX), National Stock Exchange (NSE), Bombay Stock Exchange (BSE), National Multi Commodity Exchange India (NMCE), Indian Commodity Exchange (ICEX)	
5	**International Trade Relations:**		04
	5.1	Classification of International Trade, Import Trade, Export Trade, Entrepot Trade, Characteristics of International Trade, Reasons of International Trade, Advantages and Disadvantages of International Trade, Trade as an Engine of Economic Growth, An Overview of the Developing Countries.	
		Total Hours	26

29.3 Course Objectives

S. No.	Objectives
1	To introduce learner to yoga and its importance.
2	To familiarize learner in basic yoga asanas and relaxation techniques for better mental health.
3	To understand the concept of holistic health and develop personalized health and wellness plans
4	To understand the importance of nutrition and apply healthy habits to reduce stress

29.4 Course Outcomes

The student is able to:	
CO1	*demonstrate* knowledge of principles and practices that contribute to good health.
CO2	*acquire* techniques and habits for maintaining mental well-being, such as stress management, mindfulness practices, and effective time management.
CO3	*analyze* ethical dilemmas relevant to their field of study, develop a personal code of conduct, and apply moral principles in their life.
CO4	*understand* and *build* effective habits, manage stress, optimize sleep, enhance brain health.
CO5	*explain* the importance of nutrition and identify various types of nutrients and develop healthy eating habits

29.5 Course Contents

Module		Detailed Contents	Hours
1		**Introduction to Yoga**	**06**
	1.1	Importance of yoga: History, philosophy, and different paths.	
	1.2	Basic breathing techniques (Pranayama) and their benefits.	
	1.3	Warm-up exercises to prepare the body for yoga practice.	
2		**Yoga Asanas and Relaxation Techniques**	**06**
	2.1	Foundational yoga asanas (poses) with proper alignment and modifications.	
	2.2	Introduction to relaxation techniques and their importance in yoga practice.	
3		**Standing and Balancing Asanas**	**06**
	3.1	Exploring standing and balancing poses to improve stability and focus.	

	3.2	Incorporating dynamic movements and flows to enhance mobility	
4	**Wellness and Mental Health**		12
	4.1	Understanding the concept of health and wellness, Building effective habits, habit stacking for better results, sedentary lifestyle
